

Software for improved HSE quality

New EcoWebDesk 6.4 makes inspections even more efficient

Berlin, April 23, 2014 – The updated EcoWebDesk version 6.4 comes with various innovations in the Audit Management module. Selection of new features: The new version offers the option to group numerous audit questions together in compact lists. Thus, the catalogue of questions becomes more organized which makes the execution of inspections easier. Additionally, the new filtering function offers the opportunity to filter question catalogues according to the audit that they belong to. In version 6.4 measures can be generated straight from the audit. Thus, the need for action and responsible areas automatically contain the information from the audit.

The software module Audit Management is a valuable support for companies across industries during all audit phases. Right from the planning stage, throughout the execution process and up to the identification and eradication of nonconformities, both internal as well as external audits can be electronically managed and controlled. Numerous medium-sized companies and large corporations are already using the software for the certification in accordance with international standards as well as the assessment of environmental risks and hazard assessments.

Just in time for the 28th Control, the trade fair for quality management in Stuttgart, May 6 - 9, 2014 EcoIntense will present EcoWebDesk in its most up-to-date version in hall 5, Booth 5004.

EcoWebDesk® is a combined and flexible management system for workplace safety and environmental management. Company-owned data and goals can be aligned with operational necessities and indicators, industrial environmental protection duties and legal norms as well as workplace safety requirements and risk avoidance. EcoWebDesk is strictly compliant with DIN EN ISO 14001, 50001 and OHSAS 18001, officially confirmed by DEKRA Certification GmbH. EcoIntense GmbH is certified according to DIN EN ISO 9001. In addition to the Berlin headquarters there are distribution branches in Lower Saxony and Bavaria as well as Houston, Texas (USA).
