

Improving Occupational Health and Safety with EcoWebDesk 9.3

New release supports SCORM and offline risk assessments

Berlin, May 30, 2017 – EcoWebDesk version 9.3 brings new features which allow even easier management of occupational health and safety. The Online Instructions module now supports SCORM (Sharable Content Object Reference Model), the widely-used standard for electronic learning content. When SCORM content is added, it is automatically connected with all elements in online training, including integrated learning success control. This allows you to instruct employees and visitors with even less effort. Qualifications already obtained are now produced in a summary report specifically for occupational physicians or employee records.

Starting from the current software version, risks can be assessed on-site, even without an internet connection, and then returned to the system later at the click of a mouse button. In the automatic calculation of protective measures by the simple measures concept Hazardous Substances, EcoWebDesk now also takes special arrangements for hydrocarbon mixtures into account. More differentiated and flexible combinations of evaluation options are possible in aspect and risk assessments.

EcoWebDesk is a comprehensive and integrated off-the-shelf software solution for occupational health, safety and environmental (HSE) management as well as sustainability management. In EcoWebDesk, key indicators and business goals can be aligned with operational requirements, environmental protection regulations, legal norms as well as workplace safety requirements and risk management. The software is suitable for management systems according to ISO 14001, ISO 50001 and OHSAS 18001 as confirmed by DEKRA Assurance Services. EcoIntense GmbH is certified according to DIN EN ISO 9001. The company is headquartered in Berlin, Germany. Further offices are located in Lower Saxony and Bavaria (Germany), Austria and Texas, USA.
