

HSE Software EcoWebDesk 10.0 at A+A

EcoIntense with new software release in Hall 6, Stand 6E01

Berlin, August 22, 2017 – EcoWebDesk, the software for occupational health and safety, environmental management and sustainability, has been optimized for international use with version 10.0. All the software modules and the new functions will be presented by EcoIntense from October 17-20 at the A+A trade fair in Düsseldorf, Germany in Hall 6 on stand 6E01.

EcoWebDesk 10.0 makes occupational health and safety management even more convenient above all for companies operating internationally. Multi-lingual content can be saved in a single dataset at the same time as translations. This enables users of multi-lingual systems to evaluate the data from international locations quicker and easier. The multi-lingual concept for datasets currently takes 23 languages into account.

For hazardous substances, both language and visibility can now be determined in order to regulate in a more differentiated manner. In accordance with the specifications of the CLP Regulation, it is now possible to assign the attribute of the hazard-determining substance in the EcoWebDesk hazardous substances register. Furthermore, the previous VAWS (Ordinance on Installations for the Handling of Substances Hazardous to Water) register has been updated in the register of installations in accordance with the renewed AWSV (Ordinance on Installations for the Handling of Substances Hazardous to Water) and the new specifications for operating such installations have been implemented. As a result, among other things the details about protective measures and automatically determining hazard levels as well as the water pollution classes have been adapted.

EcoWebDesk is a comprehensive and integrated off-the-shelf software solution for occupational health, safety and environmental (HSE) management as well as sustainability management. In EcoWebDesk, key indicators and business goals can be aligned with operational requirements, environmental protection regulations, legal norms as well as workplace safety requirements and risk management. The software is suitable for management systems according to ISO 14001, ISO 50001 and OHSAS 18001 as confirmed by DEKRA Assurance Services. EcoIntense GmbH is certified according to DIN EN ISO 9001. The company is headquartered in Berlin, Germany. Further offices are located in Lower Saxony and Bavaria (Germany), Austria and Texas, USA.
