

## On-the-go smart reports: better security, better quality

**The Quentic App makes you nimble.** The mobile-reporting channel for HSE is always ready when you need it—anytime, anywhere. Quickly and easily fill out forms and checklists, then dispatch them directly to the responsible authorities. Integrate your employees, third parties, and other stakeholders in the easiest possible way.

---

Transfer HSE information via smartphone

---

Use ready-made forms or create your own use cases with intuitive drag & drop interface

---

Use the app anywhere thanks to its offline function

---

Centrally evaluate and process data reports

## Brilliantly networked

With the Quentic App, you can conveniently send incident messages, test results, risk assessments, and much more—all with your smartphone. Record your experiences directly onsite, for example during an inspection, then immediately share the results with your colleagues. Customizable forms, photo capabilities, and offline features cover every use case. Also ideal for the verification of qualifications and digital certifications!

## HSE with a passion

Bring your HSE management to life with a reporting channel that motivates participation. The Quentic App is so intuitive to use that even the most inexperienced users can get started in minutes. This results in improved information exchange and distribution of tasks as well as increased awareness of safety and environmental issues.

## Get immediate reports—also from third parties

If you want to involve your suppliers, your entire workforce, or other service providers, this is also not a problem. The integrated Public Reporting allows third parties to transfer topical information to your system on-the-fly, without direct access to the Quentic App. Open the Public Link, fill out the form—done!

## Take action in real time

All messages are clearly arranged in the app's central portal and can be accessed at any time. Requirements and opportunities for optimization can be viewed seamlessly across locations, and appropriate responses to situations can be initiated in real time. You can achieve even more synergy for your HSE/CSR processes by connecting the Quentic App to the Quentic Platform: this allows you to benefit from cross-connections between reported content and your various departments.

### Ready for rollout:

You'll receive finished best-practice forms from us together with the app. At your request, individual use cases can also be created.

*The Quentic App and the Quentic Platform require separate licenses to use.*

## FEATURES

### Mobile reporting

Share HSE information via smartphone

Easy, standardized data collection and transfer

Diverse use cases, e.g. incident reports, inspection protocols, audit results, and risk assessments

Directly take and share photos onsite

Offline function allows use of app even without a network connection

Automatically specify locations such as audit areas with GPS

Access documents on-the-go

Directly initiate and communicate actions

### Individual use cases

Drag & drop form editor for convenient creation of your own forms within the app

Integrate company-specific content for users to select

Assign individualized app forms to specific users

Electronic signature support: make confirmations directly on the smartphone or tablet

API for connection of external systems

### Public Reporting and Collaboration

Public Reporting: flexible reporting without logging into the app

Include any number of users in Public Reporting via a central license

Access to transmitted data is only possible for users with the proper authorization

Ideal for simple checklists, short messages, or employee surveys

Collaboration Feature: network information across system boundaries

Strengthen information exchange between different internal departments or with external companies

### Centralized evaluations

All transmitted data is stored on the app portal

Displays dashboards and KPIs for a quick overview

SafetyFeed for transparency and open discussions around safety topics

Filter, export, and commenting functions

Clear tracking and customized responses to situations

Ability to integrate with the Quentic Platform for deeper data processing and seamless transition to advanced HSE/CSR processes (separate license required)

### Quentic—software made to order

Choose and combine Quentic modules to fit your own software system. Quentic provides unparalleled support according to your needs in the areas of health & safety, environmental management, energy management, and sustainability.
