

Hazardous materials and goods under control

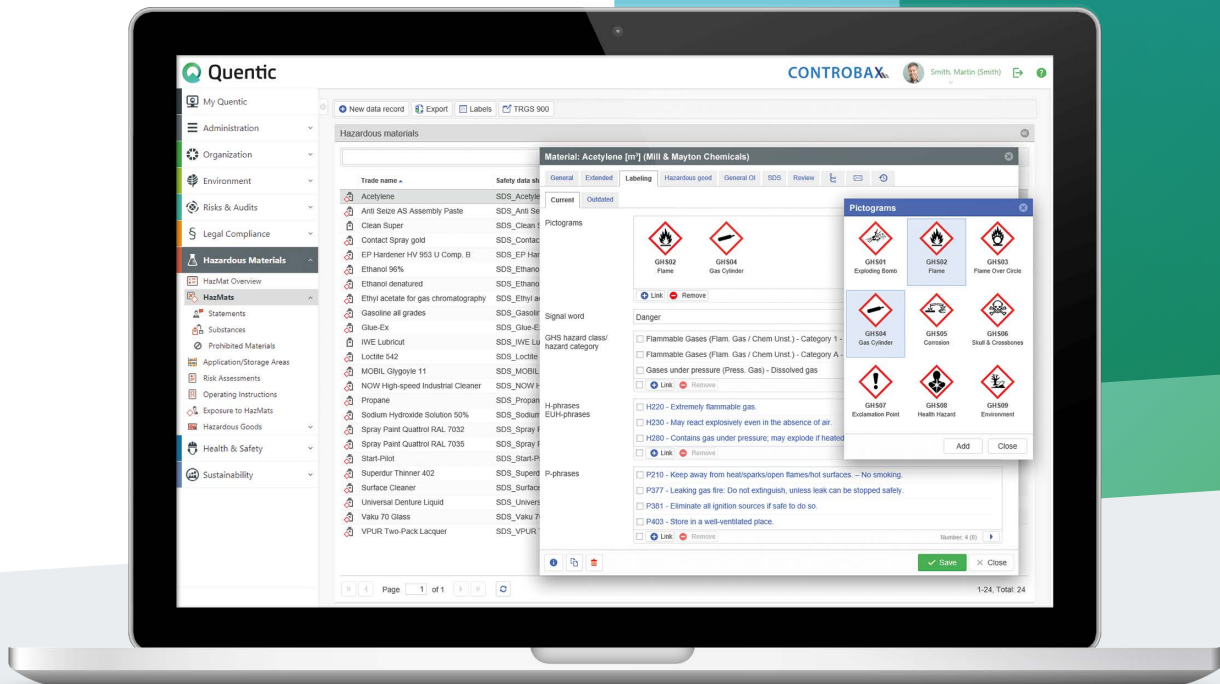

Quentic Hazardous Materials simplifies the handling of hazardous and working materials, improving occupational, health and environmental protection in your company. It assists you in meeting legal requirements, minimizing organizational efforts and providing you with a maximum of transparency in managing hazardous materials.

Central database for all working and hazardous materials as well as hazardous goods

Convenient management of safety data sheets

Assessment of risks, transportation and approval of usage

Information at hand

With Quentic Hazardous Materials, you can document all working and hazardous materials as well as hazardous goods in a consistent and well-structured manner. Defining individual substances of content and labelling hazardous materials according to GHS is done with just a few clicks. The hazmat list allows for a quick overview. You can use filters to find the required materials instantly, having all characteristics and their scopes displayed at a glance.

Keep safety data sheets well organized

You can integrate safety data sheets directly into Quentic. Quentic Hazardous Materials automatically reminds you to update in accordance with predefined cycles. You can even generate an update request to the manufacturer or supplier in no time. New safety data sheets are easily added, and the document version control ensures that content changes are transparent and traceable.

Usage and transport under control

Need to check the purpose of a hazardous material? Using Quentic Hazardous Materials, you can organize the required statements about application and approval to determine which material may be used for which purposes. Quentic collects and bundles all information and marks materials according to their clearance, allowing you to have control over the entire process. Additionally, Quentic monitors the storage and transportation of materials to help avoid improper handling. The necessary documents of transport for hazardous goods, by road, rail or boat, are issued to you in compliance with the regulations.

Conveniently evaluate and instruct

Quentic Hazardous Materials generates risk assessments and operating instructions quickly and easily. With just a few clicks, you can access required data — including safeguards — and make the completed documents available to your colleagues. You can also set up individual user accounts for all involved parties, enabling you to directly include internal and external specialists and experts.

Hazardous materials database and safety data sheets

Navigate the detailed database of working and hazardous materials as well as substances of content

Label according to GHS/CLP by means of pictograms and warning phrases

Create hazardous material labels with one click of the mouse

Manage safety data sheets, including checks for updates and automated creation of requests to the supplier (letter, fax, email)

Hazmat overview including all vital information

Hazardous goods database and transportation

Consideration of different carriers in accordance with ADR, RID, ADN, IMDG

Classification of hazardous goods including hazard labels

Documentation of hazardous goods transportation and issuing of transport documents

Checking of legitimacy of transport in accordance with regulations for small loads (ADR) and mixed loading (ADR/RID)

Approval processes, application bans, application areas
