

QUENTIC  
LEGAL COMPLIANCE

## Your guide through the legal jungle

**Quentic Legal Compliance** enables you to easily assess your need for action concerning aspects of industrial safety and environmental law. It helps you comply with all internal and external requirements, minimize your liability risk and demonstrate legally compliant processes at all company levels.

---

Database of legal norms and legal requirements with convenient update features

---

Easy management of permits and inspections

---

Ensure legal compliance in all processes and process changes

## Legal norms at their best

Using Quentic Legal Compliance, you can record company-relevant laws and regulations and save them to a centralized database, granting direct access to all involved parties, simplifying data maintenance and ensuring an up-to-date legal register. Our built-in interface connects you to an online legal database, ensuring that you stay on top of any new or changing legal stipulations. If changes do need to be made, Quentic Legal Compliance can assist in quickly and easily setting up an implementation plan with the involved corporate divisions.

## Permits from A to Z

You can record all of your company's facilities and machines under authorization in the facility database. In the same step, you can document the related permits from the first contact with the authorities to the receipt of your permit. Last but not least, this process makes deadlines, validities and auxiliary conditions more transparent.

## All inspections at a glance

With Quentic Legal Compliance, you can determine technical inspections and their repetition cycles. The well-structured inspection plan lists all inspection requirements, showing you which item is to be inspected, when and how. Now you can prepare upcoming inspections in no time and record the results in a clearly structured report.

## Thought-out change processes

Legal changes and official requirements usually demand process changes within the company that need to be well planned. Quentic offers you the best tool for a successful management of change. Evaluate change requests systematically and give a clear impression of the target state. Dividing the implementation in separate phases increases the liability. Everything is well coordinated as involved parties are integrated immediately.

## FEATURES

### Legal database and legal obligations

- Database of legal norms and affected business areas
- Deduction of any resulting requirements for your company
- Assistance in delegating responsibility for each norm and duty
- Automatic update reminders
- Simple update procedure for norms and duties
- Interface to online database for content-oriented updates
- Automatic email notifications regarding norm changes
