

Steer the company towards the future

Quentic Sustainability gives you the opportunity to assess the social, ecological and economic aspects of your company and thus create the basis for the communication with your stakeholders. By connecting everyone involved through a shared platform you enhance the collaboration and the exchange of information. Indicators from vastly different areas can be easily combined.

Assess company activities and their effects

Analyze figures, indicators, prospects and risks

Conduct the reporting without any hassle

The fitting indicators

Climate protection, working conditions, supply chains? Determine which sustainability aspects apply to your company and how they need to be analyzed. If you wish, standardized indicator catalogs, e. g. according to GRI, serve as a solid basis which you can build on by adding individual indicators. Complex indicators for automatic calculations can be effortlessly created in the formula editor.

Individual reporting, organized centrally

Who needs to report what and when, is planned centrally and on a long-term basis. Whenever needed, you can use the convenient email function to instantly inform the people involved. Thus, you create clear-cut responsibilities, without needing additional separate consultations. The well-arranged reporting plan allows you to stay on top of all reporting tasks and to see how far an ongoing reporting process has progressed.

High data quality for all areas

When a colleague is given a reporting task, they can take care of it right from within their personal overview. Everyone involved can transmit their data simultaneously and independently of place and time, which makes the division of labor very smooth. The standardized procedure ensures that all data is consistent and reliable, as the indicators from the different departments are completely, instantaneously and traceably brought together.

Evaluations by the click of a mouse

After the collected information has been approved, it can be processed. Various types of evaluations enable you to bring the content together under various aspects. This makes it easier to derive strategic decisions and effective follow-up actions. The resulting illustrative tables and charts serve as basis for the sustainability report for the various stakeholders.

Areas of action and indicators

Definition of sustainability indicators for the reporting

Embedding of standardized indicators possible, e.g. according to GRI

Differentiation between qualitative and quantitative indicators: input of numerical values, monetary information, text entry, multiple choice selection

Generation of complex indicators via formula editor, automatic calculation

Opportunity for multi-level inquiries, customized to the corresponding answers

Data collection and release

Data transmission directly and simultaneously between everyone involved

Structured, centralized data storage for targeted access in accordance with individual user rights

Options for data validation

Data release, including a recording of the approval process

Revision history makes every edit permanently traceable

Planning and organization of the reporting

Inquiry intervals to ensure regular reporting

Determining of departments and positions in charge of data collection

Defining required input, in case of data deviations

Regulation of the approval process

Automatic information of all people in charge by email

Reporting schedule provides overview of the current progress of the reporting

Evaluation and report generation

Comprehensive evaluations via charts and tables for all indicators

Automatic conversion algorithms allow for flexibility when entering and combining indicators in different measuring units

Taking into account developments of exchange rates enables exact conversion of monetary values into any currency

Export of the results into MS Word and MS Excel

Quentic—software made to order

Quentic supports your health & safety, environmental, energy and sustainability management. Featuring a module-based structure, this online software can be used in many different ways. Simply combine the desired modules to create your individual made-to-order tool.
